Numerical Methods and Programming

ECTS: 6 ECTS

COORDINATOR: Francisco José Pena Brage (fran.pena@usc.es)

UNIVERSITY WHERE THE COORDINATOR IS: USC

HAVE YOU GIVEN PERMISSION TO RECORD YOUR CLASSES? Yes

LECTURER 1: José Antonio García Rodríguez (jagrodriguez@udc.es)

UNIVERSITY WHERE THE LECTURER 1 IS: UDC

HAVE YOU GIVEN PERMISSION TO RECORD YOUR CLASSES? Yes

LECTURER 2: Duarte Santamarina Ríos (duarte.santamarina@usc.es)

UNIVERSITY WHERE THE LECTURER 2 IS: USC

HAVE YOU GIVEN PERMISSION TO RECORD YOUR CLASSES? Yes

SUBJECT CONTENTS

Part I: Introduction to Programming

1. Introduction to Matlab. Basic commands and functions.
4. Introduction to Fortran 90: Data types and control flow.
5. Arrays in Fortran 90. Procedures, modules and interfaces.

6. Input / Output data in Fortran 90.

**Part II. numerical Methods**

11. Numerical interpolation and integration in several variables.

---

**METHODOLOGY**

Theory will be taught in order for students to build small computer programs under guidance as an introduction to programming. Students will also carry out other tasks by themselves to strengthen their knowledge. The involved skills are CG2, CG4, CG5.

Students will work individually on numerical methods in order to deepen their knowledge on the subject. The involved skills are CG2, CG4, CE4, CS2.

---

**LANGUAGE USED IN CLASS:** It will depend on the audience.

---

**IS IT COMPULSORY TO ATTEND CLASS?** Students can attend via conference system.

---

**BIBLIOGRAPHY**

Basic bibliography:

**Additional bibliography:**

J.M. Viaño. Lecciones de métodos numéricos. 2.- Resolución de ecuaciones numéricas. Tórculo Ediciones, 19

**SKILLS**

**Basic:**
CG2: To be able to apply the acquired knowledge and abilities to solve problems in new or unfamiliar environments within broader contexts, including the ability to integrate multidisciplinary R & D in the business environment;

CG4: To have the ability to communicate the findings to specialist and non-specialist audiences in a clear and unambiguous way.

CG5: To have the appropriate learning skills to enable them to continue studying in a way that will be largely self-directed or autonomous, and also to be able to successfully undertake doctoral studies.

Specific:

CE4: To be able to select a set of numerical techniques, languages and tools, appropriate to solve a mathematical model.

Numerical Simulation specialization:

CS2: To adapt, modify and implement software tools for numerical simulation.

WILL YOU BE USING A VIRTUAL PLATFORM? Yes, the Google group called "Métodos Numéricos y Programación (M2I)". Each student must access to his Google account and, from there, "Ask membership in the forum" in https://groups.google.com/d/forum/mnp-m2i. The application must indicate a public name and the rest of the required information that appears in the dialog.

WILL YOU BE USING ANY SPECIFIC SOFTWARE? Yes. Matlab GNU Fortran

CRITERIA FOR THE 1ST ASSESSMENT OPPORTUNITY

The first part (50% of the qualification) will consist on the evaluation of the Matlab and Fortran practical works; both works will have the same weight to calculate the qualification of this part. The involved skills are CG2, CG4, CE4, CS2.

The second part (the remaining 50%) will correspond to the exam, where the concepts acquired in the part II of the subject will be evaluated. The involved skills are CG2, CG4, CG5.

Students must pass both parts in order to pass the subject. If one of the parts is not passed the qualification will be 4 out of 10. Besides, the practical works of Matlab and Fortran must be passed separately.

A student will be considered as “presented” when the exam and/or two practical works are presented.

CRITERIA FOR THE 2ND ASSESSMENT OPPORTUNITY
The same as for the first opportunity. The deadline for handing in the tasks will be adapted to the date of the second exam. The surpassed parts (exam, Matlab or Fortran works) in the first opportunity is conserved for the second one.
