Company info

Hi! We are Trucksters (http://trucksters.io/), a rising star(tup) in the brand new digital tech-logistics field and we have an exciting opportunity for an operations optimization role.

¿What we do? We optimize the long-distance road freight transport industry by connecting trucking companies with on-demand drivers to enable a system of relays, where one driver switches with another who is waiting in an exchange point. Just like the old system of posthouses!

¿Who we are? We are team young professionals who come from different backgrounds (strategy consulting, sales, IT) and who have a clear mission: we want to create collaboration in the trucking industry to achieve a future where people live better and resources are used more efficiently. Additionally, we have Porsche, Axel Springer and Grupo Undanet as some of our investors.

¿Where we are? We are based in Madrid although we have a global scope. We expect to have operations in Madrid, Galicia, Germany, Hungary and France in the upcoming months. **Our operating language is English and Spanish**, although in our team there are people who talk Portuguese, French, Hungarian, Russian and Italian.

Job description

We are currently looking for a **Discrete Optimization Wizard Intern** (with the expectation to take the word "intern" out of the name after a few months).

We are interested in talented individuals with a high level of motivation and sense of responsibility (we are quite flexible so we need highly responsible individuals) that will support the development of our optimization model and algorithm: from selection of the tools to the selection of the best methodology (Creativity is a must).

¿What do we offer? Very flexible way of working, superb culture, shape a Porsche and Axel Springer portfolio company and the chances of being a tech-logistic-rockstar. Economic terms are negotiable and subject to each candidate's experience.

¿What do we need from you?

- Help us build our optimization core algorithm (from now on: "brain")
- Propose new ideas and products that this program should do
- Research new ways of "doing the math"
- Research the inner workings of the transportation industry throughout Europe
- Define and implement the relationship of our "brain" with the rest of the applications in the company
- Able to pitch the project with new strategic clients

¿What should be the ideal profile?

- We need you to be **creative, brave, a fast learner and proactive**: we are doing things from scratch!
- Experience studying or working in mathematical optimization (Discrete desirable)
- Programming knowledge (R, Python….)
- Fluent in English
- Having another complementary language (e.g. French, German) would be desirable although it's not necessary
- Having worked in other startups or anything related with innovation would be desirable
